## ◆ AI Overview

To get Google Gemini on Ubuntu, the most common methods are installing the Gemini CLI via npm (Node.js required) for command-line access or using the [unofficial Gemini Desktop snap app](#) for a web-like experience, both providing easy access to the AI from your Linux terminal or desktop. For the CLI, you'll use `npm install -g @google/gemini-cli`, while for the desktop app, you'll use `sudo snap install gemini-desktop`.

## Method 1: Install Gemini CLI (Command Line Interface)
